Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 5G V2X T-Box (Tbox? competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 5G V2X T-Box is an intelligent in-vehicle terminal that serves as a critical component for enabling V2X communication. Integrating both 5G cellular and V2X communication technologies, it allows for high-bandwidth, low-latency, real-time connectivity between vehicles, infrastructure, pedestrians, and the network. The average price of 5G V2X T-Box in 2024 was \$128, with a production volume of approximately 1.25 million units.

5G V2X T-Box Market Drivers

- 1. Regulatory and Government Mandates**
Safety Regulations: Governments, particularly in the EU (e.g., eCall mandate) and China, are implementing regulations that require new vehicles to have embedded telematics systems for emergency services, theft notification, and accident data reporting. The 5G T-Box is the natural evolution to meet and exceed these requirements.
Intelligent Transportation Systems (ITS): National and municipal governments are investing heavily in smart city infrastructure. 5G V2X is seen as a critical technology to reduce traffic congestion, improve road safety, and optimize traffic flow. Policies promoting "C-V2X" (Cellular V2X) over older DSRC standards create a clear path for 5G T-Box adoption.
- 2. The Push Towards Autonomous Driving (ADAS and Beyond)**
The T-Box is the "communication hub" for a vehicle's perception system.
Enhanced Sensor Suite: Autonomous vehicles (AVs) rely on cameras, LiDAR, and radar, but these have limitations (e.g., line-of-sight, weather). 5G V2X acts as a non-line-of-sight sensor, providing critical information about road conditions, hazards, and the intentions of other vehicles far beyond what onboard sensors can detect.
Vehicle-to-Everything (V2X) Communication: This is the core function.
V2V (Vehicle-to-Vehicle): Enables platooning, collision avoidance, and cooperative driving.
V2I (Vehicle-to-Infrastructure): Allows traffic lights, signs, and road

sensors to communicate with the vehicle. V2N (Vehicle-to-Network): Connects the vehicle to cloud services for navigation, infotainment, and remote updates. V2P (Vehicle-to-Pedestrian): Enhances pedestrian safety by alerting both the driver and the pedestrian.
