The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 5N Grade Ultrapure Iron competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global 5N Grade Ultrapure Iron production reached approximately 117 tons, with an average global market price of around US\$ 0.75 million per ton. 5N-grade ultrapure iron is a very high-purity metallic iron material obtained through high-precision smelting, vacuum melting, zone melting, or chemical vapor deposition. Its impurity content is strictly controlled to below one part per million. It is a key basic raw material for electronic materials and high-end functional materials.
