Abstracts

The 60GHz millimeter wave radar sensor is a non-contact sensor that operates in the 60GHz millimeter wave band. This sensor identifies the target by transmitting a pulse signal and capturing the reflected signal using an antenna array. Further signal processing can estimate the target's distance, arrival angle, and relative speed. With the continuous development of semiconductor technology, the performance of 60GHz millimeter-wave radar sensors has been significantly improved, and the cost has gradually decreased, which has led to the continuous expansion of its application scope.
