## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 7-in-1 eDrive System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A 7-in-1 eDrive system is an advanced electric vehicle (EV) powertrain architecture that integrates seven critical components into a single, compact unit. This high level of integration aims to enhance efficiency, reduce weight and space requirements, and simplify vehicle assembly, leading to improved performance and cost savings. The integrated components of the seven-in-one electric drive system of different manufacturers are different, but usually include motors, motor controllers (MCU), reducers, DC converters (DC-DC), on-board chargers (OBC), power distribution units (PDU) and battery control units (BCU). For example, Huawei DriveONE seven-in-one electric drive system integrates these seven major components, realizing the deep integration of mechanical components and power components. In addition, the "seven-in-one" electric drive system of the front axle of the Cadillac Regal 4WD model is jointly produced by SAIC Group and Weimaisi. In addition to the highly integrated OBC, DCDC, PDU, motor, motor controller and reducer, it also integrates the DCU domain controller.

The global 7-in-1 eDrive System market size was estimated at USD 2160.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.30% during the forecast period.
