Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 8-inch High-precision Dicing Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, the production capacity of 8-inch high-precision dicing machine will reach 1,500 units. In 2024, global 8-inch high-precision dicing machine production reached approximately 1,140 units, with an average global market price of around US\$160,000 per unit. In 2024, 8-inch high-precision dicing machine's gross profit margin will reach 52%. The 8-inch high-precision dicing machine is a cutting-edge cutting device specially used in the back-end process of semiconductor manufacturing. Its core function is to accurately divide the 8-inch wafer with completed circuits into independent semiconductor chip units along the pre-marked cutting paths on the chip wafer. The 8-inch high-precision dicing machine industry chain encompasses a global ecosystem encompassing high-end technology R&D, precision manufacturing, system integration, and end-use applications. The upstream sector comprises suppliers of core components and materials, including precision spindles (dominated by only a handful of companies globally, such as DISCO and Switzerland's Kugler), high-power lasers (dominated by companies like IPG and Coherent), diamond blades/superhard abrasives (such as Japan's Sumitomo Electric Industries and China's Yellow River Cyclone), as well as high-precision motion control modules and optical vision components. The midstream sector encompasses the research and development, design, and complete manufacturing of dicing machines, which present extremely high technical barriers and a highly concentrated market. Downstream, these products are used in semiconductor wafer fabrication plants and packaging and testing facilities, with leading customers like TSMC, Samsung, and Intel accounting for a significant portion of global procurement. Ultimately, these products serve a wide range of sectors, including consumer

electronics, automotive electronics, artificial intelligence, and 5G communications.

The global 8-inch High-precision Dicing Machine market size was estimated at USD 183.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
