## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 8 Inch Semiconductor Laser Slotting Equipment competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 8-inch semiconductor laser slotting equipment is a special laser processing equipment designed for 200mm (8-inch) wafers. It is mainly used for high-precision slotting, cutting and micro-hole processing on the surface or inside of silicon, silicon carbide (SiC) or gallium nitride (GaN) wafers. The 8-inch semiconductor laser slotting equipment market has shown structural growth in recent years, mainly benefiting from the surge in demand for power semiconductors (IGBT, SiC MOSFET) and analog chips (PMIC, MEMS) in the fields of new energy vehicles, industrial control and consumer electronics. With the expansion of global 8-inch wafer fabs and the migration of third-generation semiconductors to 8-inch wafer processes, the market size of this equipment, as a key link in wafer thinning, invisible cutting and TSV through-hole processing, has grown steadily. The core driving factors include: the explosive demand for high-voltage chips in the electric drive system of new energy vehicles has promoted the upgrade of 8-inch SiC wafer processing equipment; the production capacity of mature process chips (such as MCU and sensors) has been moved back to 8 inches, forcing the replacement of old mechanical cutting equipment; China's semiconductor equipment localization policy support, local manufacturers (such as SMIC and HGU) have accelerated the replacement of imports. The competitive landscape is dominated by Japanese companies, but Chinese manufacturers have continuously increased their market share through breakthroughs in ultraviolet laser technology and cost-effective advantages. The technology trend focuses on the combination of ultrafast laser (picosecond) and AI dynamic calibration to cope with the fragmentation rate control after

8-inch SiC wafers are thinned to less than 50µm, and the equipment is iterating towards modularization and intelligence. The challenge lies in the high difficulty of controlling thermal stress in 8-inch SiC wafer processing and the potential impact of European and American laser export restrictions on China on the supply chain.

The global 8 Inch Semiconductor Laser Slotting Equipment market size was estimated at USD 212.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
