## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 800G DSP IC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The 800G DSP chip is a core digital signal processor designed for 800Gbps high-speed optical communication modules. It integrates PAM4 modulation algorithm, nonlinear damage compensation and high-precision clock recovery functions to achieve efficient encoding, equalization and decoding of optical signals, significantly improving transmission distance and bit error rate performance. It is widely used in data center interconnection (DCI), AI server clusters, 5G base station backhaul and other scenarios; typical technical paths include Credo's low-power LRO solution (such as Dove 850) and Marvell's coherent modulation solution (such as Orion DSP). The former reduces power consumption by 40%~50% by simplifying the receiving end design, and the latter uses silicon photonics technology to achieve 1.6T expansion potential.

The global 800G DSP IC market size was estimated at USD 79.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.10% during the forecast period.
