Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 800G Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of 800G switches will reach 3.45 million units, with an average selling price of US\$600 per unit and a gross profit margin of approximately 24.2%.

Downstream customers include cloud vendors such as Nvidia and Google. A switch is a data communication device used to transmit and exchange data between the internet and devices, and between devices. Each of its network ports can connect to a host or network node, enabling data interconnection among all devices. Switches are the information hubs of major enterprises. With the development of the internet and the continuous upgrade of data centers, 400G and 800G switches have become the latest network technology trends. 800G switches offer higher bandwidth and faster speeds, supporting more users and more applications. Furthermore, with the continuous development of new technologies such as cloud computing and artificial intelligence, even higher bandwidth and faster speeds are required to support these applications. With the rapid development of 5G networks, cloud computing, and artificial intelligence, data centers are increasingly demanding bandwidth. 800G Ethernet, offering higher bandwidth and lower latency, is poised for widespread adoption and market expansion. Coupled with the significant progress being made by companies both domestically and internationally in 800G communications, it's clear that 800G Ethernet will become a key growth driver in the communications market. Relevant organizations predict that by 2025, 800G Ethernet will account for over 25% of data center switch ports, indicating rapid adoption over the next few years. By 2025, the majority of switch ports deployed in AI backend networks will be 800G.

The global 800G Switch market size was estimated at USD 2070.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 42.00% during the forecast period.
