Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on 99% Battery Grade Lithium Hydroxide competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. 99% Battery Grade Lithium Hydroxide compound ($\text{LiOH}\cdot\text{H}_2\text{O}$ or anhydrous LiOH) primarily used in the production of cathode materials for lithium-ion batteries, including NCM (nickel-cobalt-manganese) and NCA (nickel-cobalt-aluminum) chemistries. This grade guarantees purity exceeding 99%, ensuring minimal metallic or sulfate impurities that could affect battery performance. It is supplied in crystalline or granular form and is essential for manufacturing high-energy-density batteries for electric vehicles, energy storage systems, and portable electronics. The market chain begins upstream with lithium resource extraction from spodumene ore and brine sources. Midstream involves chemical refining, purification, crystallization, and granulation processes to achieve 99% purity, often integrated with cathode precursor production facilities. Downstream sectors include battery manufacturers, EV OEMs, and ESS integrators using lithium hydroxide in cathode fabrication. Supporting industries include mining equipment suppliers, chemical engineering firms, and logistics providers specializing in hazardous material transport. Strategic partnerships between mining companies and battery makers are strengthening supply stability across North America, Asia-Pacific, and Europe amid growing EV demand. Production typically involves calcination of spodumene concentrate into β -spodumene, followed by acid or alkaline leaching to extract lithium sulfate or carbonate, which is then converted into lithium hydroxide through causticization with lime ($\text{Ca}(\text{OH})_2$) or electrolysis. Advanced purification steps such as ion-exchange, membrane separation, and crystallization ensure 99% purity. Modern plants integrate closed-loop water recycling, energy recovery, and automated process control systems. Emerging technologies include direct

lithium extraction (DLE) from brines and conversion of recycled battery materials into high-purity lithium hydroxide. Quality assurance follows ISO and battery-grade certification standards such as GB/T 8766 and ASTM E1473.2024 Global Market sales Volume: 1.1 million tons, Average Global Market Price: USD 1800 per ton, Market Average Gross Profit Margin: 25%.

The global 99% Battery Grade Lithium Hydroxide market size was estimated at USD 1980.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.00% during the forecast period.
