Abstracts

A36 is a steel for carbon structure. It is a steel of American ASTM standard. Despite unprecedented volatility, the first half of 2022 remained strong for steel players, with prices and utilization higher than historical levels and unprecedented levels of EBITDA margins across most regions. This cycle was driven mainly by positive demand outlook that followed the recovery from disruptions caused by COVID-19, as well as infrastructure spending that was both long overdue and anticipated as part of the recovery stimulus. However, several signs of market slowdown began to appear in early 2022. As a result, steel demand outlooks have been revised downward: in April 2022, the World Steel Association's short-range outlook was less optimistic than the one from late 2021, and its October 2022 demand forecasts for 2022 and 2023 saw downward revisions of 2.7 and 1.2 percent, respectively. Reasons for this include the ongoing war in Ukraine, waves of COVID-19-related lockdowns in China, and supply chain disruptions, as well as the overall macroeconomic situation, including repercussions from persistently high inflation and rising global interest rates. In steel markets, EBITDA margins and the margin over raw materials (MORM) have significantly declined from previously unseen highs, mainly due to negative market expectations and high energy prices, and players have reacted by idling capacities. In fact, more than 30 million metric tons per annum (MTPA) of capacities have idled in Europe in the second half of 2022, while approximately half of those capacities have been brought back online in 2023 when margins slightly recovered. As the steel industry continues to progress into 2023, we expect this level of volatility to be sustained across the entire value chain.

The global A36 Steel Sheet market size was estimated at USD 1251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
