Report Overview

Abaca, also called as manila hemp, is extracted from the leaf sheath around the trunk of *Musa textilis*, a type of banana plant that is mostly found in the Philippines and humid tropics. Harvesting and cultivating abaca is a labor-intensive process as the pulp is removed by cutting strips and scraping stalks. Fibers obtained from the process are then dried and removed. Abaca fiber has high strength and is used in the paper industry for making mimeograph mats and teabags. It is also used to make handicraft such as carpets, furniture, clothing, and bags. Abaca fiber is used in fishing nets, hawsers, and shipping lines due to beneficial properties such as flexibility, durability, and saltwater resistance. It is classified as a hard fiber along with sisal, coir, and henequin. In addition, abaca fiber is used in gifts, toys, and housewares. Furthermore, it is used as an alternative to glass fiber reinforced plastics components.
