Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Abamectin EC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Abamectin EC is an insecticidal and acaricidal formulation containing abamectin as the primary active ingredient, derived from macrocyclic lactone antibiotics. It functions by irreversibly activating glutamate-gated chloride channels in pest nerve cells, causing hyperexcitation, paralysis, and death. This formulation is highly effective against a wide range of agricultural pests (e.g., spider mites, leaf miners, root-knot nematodes) and livestock parasites (e.g., scabies mites, gastrointestinal nematodes). The emulsifiable concentrate (EC) formulation consists of abamectin dissolved in organic solvents (e.g., xylene) with added emulsifiers, requiring dilution in water to form a stable emulsion for foliar spraying or soil application. Due to its high efficacy, low residue, and environmental compatibility, Abamectin EC is widely used in field crops, fruit trees, vegetables, and animal husbandry.

The global Abamectin EC market size was estimated at USD 1251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
