Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Abamectin TC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Abamectin TC is the high-purity technical-grade active ingredient of abamectin, primarily composed of two homologs (B1a and B1b), derived from the fermentation of *Streptomyces avermitilis*. As a macrocyclic lactone compound, it disrupts neurotransmitter transmission in pests, leading to rapid paralysis and death, with potent activity against mites, nematodes, and certain insects. The technical material typically appears as a white to pale yellow crystalline powder with a purity >90%, requiring further processing into formulations such as emulsifiable concentrates (EC), wettable powders (WP), or microcapsules. Due to its unique mode of action and low cross-resistance risk, Abamectin TC is vital in agricultural pest control and veterinary antiparasitic applications.

The global Abamectin TC market size was estimated at USD 1371.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
