Report Overview

Abdominal pads are sterile or non-sterile medical dressings designed to absorb exudate, protect wounds, and maintain a clean environment for post-surgical incisions, cesarean sections, or other abdominal procedures. These pads typically feature highly absorbent materials such as cotton, cellulose, or superabsorbent polymers, often layered with a non-adherent backing to prevent sticking to wounds. They come in various sizes and thicknesses to accommodate different levels of drainage and are commonly used in hospitals, clinics, and home care settings. The product is essential in post-operative care, helping to minimize infection risks and promote healing, with demand driven by surgical volumes, wound care protocols, and an aging population requiring more medical interventions.

The global Abdominal Pads market size was estimated at USD 389.88 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.32% during the forecast period.
