## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on ABF Substrate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. ABF, otherwise known as "Ajinomoto Build-up Film" is a resin substrate that acts as an insulator in all modern ICs. The ABF is a highly durable and rigid film that resists expansion and contraction with changes in temperature, making it ideal for use as a substrate between the nanometer-scale and millimeter-scale components of a processor or IC. The ABF (Ajinomoto Build-up Film) Substrate consists of multiple layers of microcircuits, known as a "build-up substrate" which allows the formation of these miniature components as its surface is receptive to laser processing and direct copper plating. Most modern chipmakers use ABF to design the smaller components of their CPUs and GPUs.

The global ABF Substrate market size was estimated at USD 5355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
