Abstracts

Abrasive polishing fluid, also known as chemical-mechanical polishing (CMP) slurry, is a specialized chemical suspension composed of abrasive nanoparticles—typically silica, alumina, or ceria—dispersed in a liquid medium containing oxidizers, surfactants, and stabilizers, designed to precisely and uniformly remove material from surfaces through a combination of chemical reaction and mechanical abrasion, primarily used in semiconductor manufacturing for planarizing wafer layers, as well as in optics, precision optics, and metal finishing industries to achieve nanoscale surface smoothness, flatness, and defect reduction. The market for abrasive polishing fluid is driven by the expanding semiconductor industry, particularly with advancements in chip miniaturization, 3D NAND, and logic devices requiring increasingly sophisticated CMP processes, alongside growing demand from applications in LED production, MEMS devices, and advanced ceramics; key market trends include the development of eco-friendly, low-defect, and high-selectivity slurries, as well as a shift toward customized formulations for specific substrates and process requirements, with major players focusing on R&D to support next-generation technology nodes below 7nm and 5nm. Geographically, Asia-Pacific dominates consumption due to high semiconductor fabrication concentration in Taiwan, South Korea, and China, while North America and Europe remain significant due to presence of key slurry manufacturers and advanced R&D facilities; the market is characterized by high technical barriers, stringent quality standards, and a competitive landscape led by specialized chemical companies, though it faces challenges such as raw material price volatility, environmental regulations concerning nanoparticle disposal, and the need for continuous innovation to keep pace with evolving manufacturing protocols.

The global Abrasive Polishing Fluid market size was estimated at USD 855.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50%

during the forecast period.
