Abstracts

ABS (Acrylonitrile Butadiene Styrene) 3D printing filament is a thermoplastic polymer widely used in fused deposition modeling (FDM) 3D printing, valued for its durability, impact resistance, and ability to withstand moderate temperatures, making it suitable for functional prototypes, automotive parts, consumer goods, and engineering applications. It requires a heated print bed and enclosed printing environment to minimize warping and layer separation due to its tendency to shrink as it cools. Compared to other filaments like PLA, ABS offers superior mechanical properties and post-processing capabilities, such as acetone smoothing, but emits fumes during printing that necessitate adequate ventilation.

The global Abs 3D Printing Filament market size was estimated at USD 75.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 18.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Abs 3D Printing Filament market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
