The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on ABS Reluctor Ring competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. ABS Reluctor Ring? Anti-lock Braking System Reluctor Ring? is a ring-shaped component mounted on a car wheel or drive shaft that works with an ABS (anti-lock Braking System) speed sensor. It usually has evenly distributed teeth and grooves. When the wheel rotates, the teeth and grooves pass through the ABS sensor in sequence, changing the magnetic flux around the sensor and thereby generating an electrical signal related to the wheel speed. These signals are received and processed by the ABS control unit to monitor the rotational speed of each wheel, prevent the wheels from locking up during braking, and ensure the stability and controllability of the vehicle during braking.

The global ABS Reluctor Ring market size was estimated at USD 240.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
