Abstracts

Absolute multi-turn encoders are specialized sensors designed to measure and report the angular position of a rotating shaft or component with high precision over multiple revolutions. Unlike single-turn encoders, which provide positional information for one full rotation (360 degrees), multi-turn encoders can track and report both the position within a single revolution and the total number of revolutions, offering comprehensive feedback for extended rotational movements.

The global Absolute Multi-Turn Encoders market size was estimated at USD 987.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
