Abstracts

Absolute single-turn encoders are sensors that measure the angular position of a rotating shaft or component within a single revolution, providing a unique and specific position value for every point in that 360-degree rotation. Unlike incremental encoders, which only provide information about changes in position, absolute encoders give an absolute positional value, ensuring that the exact position is known at all times, even after power loss or system interruptions.

The global Absolute Single-Turn Encoder market size was estimated at USD 368.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
