Abstracts

Absorbable adhesion barriers are medical devices designed to prevent or reduce the formation of abnormal fibrous bands (adhesions) between tissues and organs following surgery, particularly in abdominal, pelvic, cardiac, and spinal procedures. These barriers are typically made from biocompatible, biodegradable materials such as hyaluronic acid, carboxymethylcellulose, polyethylene glycol, or collagen that create a temporary physical separation between healing tissues, gradually absorbing into the body over a period of days to weeks without requiring surgical removal. By minimizing adhesion formation, these products aim to reduce postoperative complications, chronic pain, bowel obstructions, infertility, and the complexity of future surgeries.

The global Absorbable Adhesion Barrier market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
