Abstracts

Absorbable ligation clips are medical devices used in surgical procedures for vessel and tissue occlusion, designed to securely close tubular structures such as blood vessels or ducts without permanent foreign body retention. Composed of biocompatible, slowly degrading materials like polydioxanone (PDX) or polyglycolic acid (PGA), these clips provide temporary mechanical support during healing before being safely absorbed by the body over weeks to months, reducing long-term complications such as migration, imaging interference, or inflammation associated with non-absorbable alternatives. They are commonly applied in minimally invasive and open surgeries across specialties like general surgery, gynecology, and urology, offering advantages in procedures where permanent implants are undesirable or where follow-up imaging clarity is critical.

The global Absorbable Ligation Clips market size was estimated at USD 1234.56 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
