Report Overview

Absorbed glass mat (AGM) battery is an advanced technology battery compared to lead- acid flooded battery. AGM batteries are constructed in such a way that the electrolyte is made to be suspended between the glass mat (primarily made of fiberglass) and battery plates. The amount of electrolyte is minimal in such batteries and it contains only enough electrolyte to keep the mat wets. If we compare traditional lead acid batteries with AGM batteries then AGM batteries are far more efficient because of its design and construction, better lifespan, resistance to vibrations, no spillage or leakage and more capacity.

The global Absorbed Glass Mat (Agm) Battery market size was estimated at USD 14150.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
