Abstracts

Absorption towers are specialized chemical processing units designed to remove one or more components from a gas stream by dissolving them into a liquid solvent; this mass transfer operation is fundamental across industries such as oil and gas, chemicals, power generation, and environmental management for applications including acid gas removal (e.g., CO₂, H₂S, SO₂), VOC abatement, and product recovery. The market for these systems is driven by stringent environmental regulations, growing emphasis on carbon capture and storage (CCS) technologies, rising natural gas processing demand, and industrial expansion in emerging economies, with key players offering customized designs that optimize efficiency, corrosion resistance, and operational costs through advanced materials (e.g., specialized alloys, plastics) and internals like packing or trays.

The global Absorption Tower Chemical market size was estimated at USD 1450.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
