Report Overview

An induction motor or asynchronous motor is an AC electric motor in which the electric current in the rotor needed to produce torque is obtained by electromagnetic induction from the magnetic field of the stator winding. An induction motor can therefore be made without electrical connections to the rotor. An induction motor's rotor can be either wound type or squirrel-cage type.

Global induction motor market is primarily driven by the rising demand for electric vehicles, technological advancement, and the rapid rate of industrialization in emerging countries. There is a tremendous pressure on countries at a global forefront to cut the greenhouse gases emission. For this, they are promoting electric vehicles globally. Industrial application is the leading segment in terms of revenue in the global induction motor market.
