### Report Overview

AC-DC Power Rectifier are devices that convert AC power to DC power. They can be used to power devices and detect radio signals. Rectifiers can be made of vacuum tubes, pilot tubes, solid-state silicon semiconductor diodes, mercury arcs, etc. In contrast, a device that converts DC power to AC power is called an 'inverter' In the standby UPS, only the battery needs to be charged, and the load does not need to be powered, so there is only a charger. In a double-conversion UPS, this device not only supplies power to the inverter but also charges the battery, so it is called a rectifier / charger.
