Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AC Servomotors competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An AC Servomotor is a type of electric motor that operates on alternating current (AC) and is specifically designed to provide precise control of angular position, speed, and torque in automation and motion control systems, typically consisting of a motor, feedback device (such as an encoder or resolver), and drive circuitry, and widely used in CNC machines, robotics, conveyors, and other applications requiring high accuracy and dynamic performance. In 2024, global AC Servomotors production reached approximately 27.13 million units, with an average global market price of around US\$ 280 per unit. Global market growth forecasts for 2025 have been moderately adjusted in response to evolving macroeconomic and geopolitical dynamics. In the United States, heightened uncertainty surrounding trade and tariff policies has led to a slight downward revision of the country's projected market growth rate. While not indicative of a contraction, this cautious outlook reflects the hesitancy among manufacturers and downstream stakeholders to commit to large-scale capital investments in the absence of clear long-term policy signals. In contrast, the European market remains relatively stable. Despite lingering economic pressures and structural headwinds, the region continues to demonstrate resilience, supported by a strong base of industrial production and sustained demand in sectors such as transportation, energy transition, and digital infrastructure. Asia, particularly China, is showing early signs of recovery following a prolonged period of subdued economic activity. The rebound is especially evident in the semiconductor and machine tool sectors, where renewed domestic investment and policy support have begun to lift confidence and operational activity. Japan, having recently concluded tariff negotiations with the United States, appears to be relatively

insulated from the potential impact of a 15% duty on selected goods. As a result, the country's market outlook has improved marginally, underpinned by stable domestic consumption and robust export performance in high-tech industries. India and Southeast Asia continue to stand out as high-growth regions, driven by strong demographic trends, digital transformation, manufacturing diversification, and rising infrastructure investment. These markets are expected to maintain accelerated expansion trajectories over the next few years, positioning themselves as key engines of global demand. Other regions present a more mixed picture. In Latin America, growth expectations for 2025-2026 have been tempered by persistent economic fragility, political uncertainties, and weak industrial momentum. Conversely, in the Middle East and Africa, a relative improvement in geopolitical stability has prompted a slight upward revision in growth projections. Increased infrastructure spending, energy diversification, and regional integration efforts are supporting modest but positive momentum. Taking all regions into account, the global market's compound annual growth rate (CAGR) for the coming years has been recalibrated to 5.04%. While challenges persist, particularly in mature and volatile markets, the overall outlook reflects cautious optimism anchored by sustained expansion in Asia and selective recovery in key industrial sectors.

The global AC Servomotors market size was estimated at USD 7427.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
