Abstracts

An AC three-phase servo drive is a specialized electronic device used to control the precise motion of three-phase AC servo motors, typically in industrial automation and robotics applications. It functions by receiving command signals from a controller and converting them into high-frequency, variable voltage and current outputs that regulate motor speed, torque, and position with exceptional accuracy. These drives incorporate feedback mechanisms, such as encoders or resolvers, to continuously monitor motor performance and adjust output in real-time, ensuring dynamic responsiveness and stability under varying loads. They are integral to systems requiring high-performance motion control, including CNC machinery, packaging equipment, and automated assembly lines, offering advantages such as energy efficiency, reduced mechanical wear, and improved productivity through precise synchronization and repeatability.

The global Ac Three Phase Servo Drive market size was estimated at USD 850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
