### Report Overview

The top drive drilling system is a new type of drilling technology emerging in the 1980s. It is a major breakthrough in rotary drilling technology and is a new type of oil drilling device used to replace the top drive device of the rotary table. Because it significantly improves the ability and efficiency of drilling operations, it is known as one of the three major technical achievements of modern drilling equipment. It has been highly valued by oil companies around the world and has become a representative of advanced oil drilling equipment. The top drive drilling system has been widely promoted and applied on various offshore and onshore drilling rigs, and the technology has developed rapidly. Based on the AC-SCR-DC electric drive, the top drive drilling unit has developed a more advanced AC variable frequency electric drive top drive. AC frequency conversion top drive drilling device is usually composed of body, electrical drive and control system, adopts AC frequency conversion drive mode, it directly rotates the drill pipe from the upper space of the derrick, sends it down along the special guide rail, and completes various drilling operations. AC variable frequency electric top drive is mainly used on large onshore drilling rigs or offshore drilling rigs.
