Abstracts

An acceleration data logger is a specialized electronic device designed to measure, record, and store acceleration data across one or more axes over a period of time, typically using MEMS (Micro-Electro-Mechanical Systems) accelerometers as its core sensing technology. These instruments capture dynamic changes in velocity?including vibrations, shocks, tilt, and motion?in environments ranging from industrial and automotive testing to structural health monitoring and consumer electronics validation. Data is stored internally or transmitted in real-time, often featuring configurable sampling rates, high resolution, and ruggedized designs to withstand harsh conditions. Key parameters monitored include peak acceleration, frequency response, and duration of events, with outputs used for analysis, quality assurance, compliance verification, or research purposes.

The global Acceleration Data Logger market size was estimated at USD 380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
