### Report Overview:

The accelerator-pedal module (APM) is a ready-to-install unit with pedal-travel sensor and idle and full-load stops. A kick-down switch is incorporated when the module is used with automatic gearboxes. Mechanical and electronic components form a single functional unit. An integrated intended fracture point ensures good crash behavior.

The accelerator-pedal module comprises an accelerator pedal and a potentiometer or a non-contacting Hall sensor as angular-position sensor. This sensor registers the movement and the position of the accelerator pedal. From this information, the engine management calculates the required torque and accordingly addresses the throttle device and the injection system. The accelerator-pedal module can output analog or digital signals.

The Global Accelerator Pedal Module Market Size was estimated at USD 2777.59 million in 2023 and is projected to reach USD 3374.97 million by 2029, exhibiting a CAGR of 3.30% during the forecast period.
