Abstracts

Access controllers are physical or logical security systems that manage and restrict entry to protected areas, digital resources, or sensitive data by verifying credentials and enforcing predefined permissions. These systems range from simple keypad or card-based mechanisms for doors to sophisticated biometric, mobile credential, or cloud-based solutions integrated with broader security ecosystems, including surveillance and alarm systems. Access controllers function by authenticating users through something they have (like a card or mobile device), something they know (like a PIN), or something they are (like a fingerprint or facial scan) and granting or denying access based on authorization rules, logging all activity for auditing and compliance purposes. They are essential for safeguarding assets, ensuring operational security, and meeting regulatory requirements across various sectors.
