Abstracts

Acid protease feed additive is a specialized enzyme preparation derived from microbial fermentation, primarily designed to supplement the digestive capabilities of monogastric animals such as poultry, swine, and aquaculture species by breaking down protein-rich feed ingredients into more digestible peptides and amino acids, thereby improving nutrient absorption, enhancing feed conversion ratios, reducing feed costs, and minimizing nitrogen excretion into the environment. This additive functions optimally in the acidic conditions of the stomach, where it hydrolyzes complex proteins that might otherwise remain undigested, making it particularly valuable in diets containing plant-based proteins with anti-nutritional factors or for young animals with underdeveloped digestive systems.

The global Acid Protease Feed Additive market size was estimated at USD 365.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
