Abstracts

Anterior cruciate ligament (ACL) is made of tough fibrous material which is located within the knee joint. It ranges from the medial surface of the lateral femoral condyle, which is a part of the lower end of the thigh bone, to the front of the anterior tibial spine, which is a part of the upper end of the shin bone. The anterior cruciate ligament acts primarily to maintain joint stability by restraining the forward motion of the shin bone relative to the thigh bone. ACL injury is a complete rupture or tear of a ligament and is one of the most common knee injuries. People engaged in high-risk sports activities such as skiing and football are prone to ACL injury. Approximately 70% to 84% of ACL injuries are caused by a non-contact mechanism, such as a rapid deceleration, in a sports setting. ACL reconstruction repair may be surgical or non-surgical. An ACL Reconstruction comprises the removal of the damaged ACL, harvesting of the graft (if it's an autograft), drilling of the femoral and tibial tunnels, preparing of the graft, placing the graft in an anatomically similar or different to the original position of the ACL, and finally fixing the graft. According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

The global ACL Reconstruction market size was estimated at USD 2963.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80%

during the forecast period.
