## Abstracts

Acne, also known as acne vulgaris, is a long-term skin condition that occurs when dead skin cells and oil from the skin clog hair follicles. Typical features of the condition include blackheads or whiteheads, pimples, oily skin, and possible scarring. It primarily affects skin with a relatively high number of oil glands, including the face, upper part of the chest, and back. The resulting appearance can lead to anxiety, reduced self-esteem, and, in extreme cases, depression or thoughts of suicide. Acne medicine refers to pharmaceutical or topical treatments designed to prevent, reduce, and manage acne breakouts. These treatments may include over-the-counter (OTC) products, such as creams, gels, and cleansers containing ingredients like benzoyl peroxide, salicylic acid, or retinoids. Prescription medications may also be used for more severe cases, including oral antibiotics, hormonal therapies, and isotretinoin. Acne medicines aim to reduce inflammation, unclog pores, kill acne-causing bacteria, and regulate skin oil production. A key driver of the acne medicine market is the growing prevalence of acne among adolescents and adults, driven by factors such as hormonal changes, stress, and unhealthy diets. As a result, there is a rising demand for effective treatments, both over-the-counter and prescription-based. Additionally, the growing awareness of skincare and the increasing influence of social media in promoting beauty and wellness products have further fueled market growth, as more consumers seek out acne treatments to maintain clear and healthy skin. However, a major challenge in the acne medicine market is the side effects and long-term safety concerns associated with some treatments, especially prescription medications like isotretinoin, which can cause severe side effects. Moreover, individual skin responses vary, leading to dissatisfaction or limited effectiveness in some patients. This can reduce consumer confidence in available treatments, resulting in the demand for safer, more personalized acne therapies. Global core acne medicine manufacturers include Galderma, Bausch Health, Teva etc. The top 3 companies hold a share about 50%. North America is the largest

market, with a share about 50%, followed by Europe and Asia Pacific with the share about 25% and 15%. In terms of product, prescription medicine is the largest segment, with a share over 77%. And in terms of application, the largest application is topical, followed by oral.

The global Acne Medicine market size was estimated at USD 3598.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
