Abstracts

Acoustical putty pads are specialized non-hardening, moldable sealing compounds designed to effectively block airborne sound transmission through gaps, cracks, and penetrations in walls, floors, and ceilings, particularly around electrical outlets, plumbing pipes, and data cabling; they consist of high-density materials such as butyl rubber or other viscoelastic polymers, which provide both acoustic mass and flexibility to maintain a continuous seal even as building materials shift over time, thereby improving Sound Transmission Class (STC) ratings and meeting building code requirements for noise control in residential, commercial, and institutional structures.
