Abstracts

Acousto optic Q switches are specialized electro-optical devices used in laser systems to modulate the quality factor (Q) of the laser cavity, enabling the generation of high-energy, short-duration laser pulses by temporarily storing energy and releasing it in a single burst; these components operate based on the interaction between acoustic waves and light, where an applied radio frequency signal creates a periodic refractive index grating via the acousto-optic effect, diffracting the laser beam out of the cavity to achieve low-Q state and allowing rapid switching to high-Q for pulse emission when the acoustic wave is turned off.

The global Acousto Optic Q Switches market size was estimated at USD 52.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
