Abstracts

Acrylated Glycidyl Ether, also known as Allyl Glycidyl Ether, is a colorless, transparent liquid with a characteristic odor. It is highly soluble in water and also dissolves in organic solvents such as acetone, benzene, carbon tetrachloride, and alcohols. Acrylated Glycidyl Ether is a monofunctional epoxy reactive diluent primarily used in solvent-free epoxy paints. It contains an epoxy group and an allyl group, where the epoxy group allows it to participate in the curing process of epoxy resins, becoming part of the crosslinked network structure of the cured material. Due to its epoxy group, Acrylated Glycidyl Ether can also participate in various chemical reactions, such as ring-opening addition and polymerization. It is stable at room temperature, but may be prone to polymerization and the formation of explosive peroxides. It reacts violently with strong oxidizers, acids, and bases, posing fire and explosion hazards. When burned, it decomposes to produce toxic gases, such as carbon monoxide and carbon dioxide.⁴⁰

The global Acrylated Glycidyl Ether market size was estimated at USD 283.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
