## Abstracts

Acrylic Polyurethane Coating is a high-performance coating made of acrylic resin, polyester resin and amino resin through cross-linking reaction. It is characterized by excellent weather resistance, chemical resistance, wear resistance and high gloss, as well as good adhesion and hardness. The coating forms a dense network structure during high-temperature curing, which enables it to maintain stable performance in harsh environments. Acrylic polyester amine coating is widely used in automobiles, home appliances, construction, industrial equipment and other fields, especially for surface coatings that require high decorativeness and durability. In recent years, with the strengthening of environmental protection regulations, water-based acrylic polyester amine coating has gradually become the mainstream of the market, driving the industry to develop in the direction of green and environmental protection. Its excellent comprehensive performance makes it one of the important choices for high-end industrial coatings.
