Report Overview

Acrylonitrile butadiene rubber, or nitrile rubber (NBR), is synthetic rubber copolymer produced by the polymerisation of acrylonitrile (ACN) and butadiene (BD). An important property of nitrile rubber is its resistance to aliphatic hydrocarbon oils and fuels as well as some chemicals. Increasing the content of acrylonitrile in the nitrile rubber improves its resistance to oil but reduces its low temperature flexibility.

Nitrile rubber is also noted for its high resilience and resistance to abrasion, water, alcohols and heat. However, it only has moderate strength and is less resistant to ozone, aromatic hydrocarbons and strong oxidants.

The properties of nitrile rubber make it suitable for use in automotive and industrial applications. For example, it is used in hoses, O rings, gaskets, oil seals, transmission belts as well as footwear, gloves, adhesives and sealants.
