Abstracts

Acrylic-styrene-acrylonitrile copolymer (ASA) is a thermoplastic elastomer. This type of copolymer has excellent resistance to UV irradiation, heat, moisture, and stress cracking and probably has the best weathering resistance of all acrylonitrile elastomers. It also has good chemical resistance and high impact strength. Its mechanical properties are very similar to acrylonitrile butadiene styrene (ABS) elastomers. One of the most important markets for ASAs are automotive body parts such as mirror housings and radiator grills. ASA thermoplastics are also extensively used in the building & construction, appliance, electrical/electronics, and sports goods industries. From the perspective of product market application, ABS resin has excellent formability, impact resistance and gloss, but because of the use of butadiene rubber in ABS synthesis, it contains a double bond structure, so it is easy to decompose ultraviolet rays, heat and oxidation. Therefore, ASA can overcome the defects of ABS without a double-bond structure, and ASA is an excellent weather-resistant resin that is increasingly used in the fields of automobiles, construction, home appliances, sports and leisure, and consumer electronics. Automotive is the largest application area, because the automotive market is huge, and the demand for resins for rearview mirrors and other parts is high. In 2022, the sales volume of the automotive industry will account for 50.03% of all applications.

The global Acrylonitrile Styrene Acrylate (ASA) Engineering Plastics market size was estimated at USD 1247.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
