Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Acryloyl Morpholine (ACMO) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Acryloyl Morpholine (ACMO) is a monofunctional acrylate reactive monomer that is a colorless to pale yellow transparent liquid at room temperature. It contains an active acryloyl group (which can participate in crosslinking through free radical polymerization) and a hydrophilic/polar morpholine ring, which makes this monomer exhibit low viscosity, good compatibility, and high reactivity in systems such as photocuring, adhesives, and coatings. The upstream mainly consists of morpholine or its derivatives, acryloyl chloride/acrylic acid raw materials, etc. The downstream market comprises UV/EB photocurable resins, UV inks, adhesives, 3D printing resins, etc. Global sales volume in 2024 was approximately 12,000 tons, with an average market price of approximately US\$7,000 per ton. Single-line production capacity varies depending on production processes and investment scale, ranging from approximately 300-1000 tons per year, with industry gross profit margins ranging from 20% to 30%.

The global Acryloyl Morpholine (ACMO) market size was estimated at USD 84.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
