Abstracts

Activated charcoal facial scrub is a facial cleansing care product that combines activated charcoal with scrub particles. It has a strong adsorption capacity and can absorb dirt, excess oil and impurities in the pores on the skin surface, helping to deep clean the skin, improve the oily condition of the skin, and make the skin more refreshing. And this adsorption property of activated charcoal also helps to reduce the formation of blackheads and acne. Scrub particles are usually ground from natural substances such as almond kernels, walnut shells, etc., or some artificially synthesized tiny particles. These particles remove the accumulated aging keratin cells on the skin surface through friction with the skin during use, promote skin metabolism, make the skin smoother and more delicate, and enhance the skin's ability to absorb subsequent skin care products.

The global Activated Charcoal Face Scrub market size was estimated at USD 986.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
