## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Active Ester Resin competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of reactive ester resins reached 4,634.36 tons, with an average selling price of US\$22,085 per ton. The annual production capacity of a single reactive ester resin production line is approximately 1,200 tons, with a gross profit margin of approximately 34.7%. Reactive ester resins are special resin materials containing "reactive ester groups" in their polymer or resin molecular chains. These resins typically possess high chemical reactivity, enabling them to form efficient chemical bonds or crosslinks with other molecules in subsequent reactions. Therefore, they are widely used in coatings, adhesives, coatings, and composite materials. Upstream raw materials for reactive ester resins include reactive ester resins, photocuring additives, separation and extraction equipment, etc. The midstream consists of reactive ester resin manufacturers, while the downstream mainly includes industries such as communications and electronic packaging.

The global Active Ester Resin market size was estimated at USD 102.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
