Abstracts

An active magnetic bearing works on the principle of electromagnetic suspension based on the induction of eddy currents in a rotating conductor. When an electrically conducting material is moving in a magnetic field, a current will be generated in the material that counters the change in the magnetic field (known as Lenz's Law). This generates a current that will result in a magnetic field that is oriented opposite to the one from the magnet. The electrically conducting material is thus acting as a magnetic mirror. Active bearings have several advantages: they do not suffer from wear, have low friction, and can often accommodate irregularities in the mass distribution automatically, allowing rotors to spin around their centre of mass with very low vibration. Europe is projected to lead the global market during the forecast period. The market in Asia Pacific is expanding at a substantial pace. At the perspective of key manufacturers, SKF, Waukesha Bearings and Schaeffler are the top three players of Global Active Magnetic Bearing market, and their revenue share was 49.44% in 2019. To some extent, it reflects that the market is relatively fragmented. Magnetic bearings are used in various industries such as bio-medical engineering, semiconductor industry, maglev transportation, precision engineering, aerospace, turbo machines, vacuum technology and structural isolation. Magnetic bearings are vividly used in compressors, pumps, generators, turbines and motors. They are widely used in watt-hour meters, in high precision equipment, used to support instruments in vacuum (example: flywheel energy storage systems), used in certain centrifugal compressors, used in artificial hearts, used in various ventricular assisting devices (Life flow heart pump uses magnetic bearings), used in turbo molecular pumps, active magnetic dampers, turbo machines, smart aero engines, high precision position stages, blood pumps, variable speed spindles, elastic rotor control, pipeline compressors and used in gears, conveyors, chains, etc.

The global Active Magnetic Bearing market size was estimated at USD 309.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
