Active manual wheelchairs are specially designed mobility devices that provide individuals with limited mobility or physical disabilities the ability to move independently. These wheelchairs are characterized by their manual propulsion, where the user manually propels the wheelchair using their hands on the wheels or by pushing off the ground with their feet. Active manual wheelchairs are engineered to be lightweight, sturdy, and customizable to accommodate various user needs, including different seat widths, heights, and depths, as well as adjustable footrests and armrests. They are often constructed with materials like aluminum or titanium for durability and ease of maneuverability.
