## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Active Noise-cancelling (ANC) Bluetooth Earphones competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Active Noise-cancelling (ANC) Bluetooth Earphones production reached approximately 125,017 K units, with an average global market price of around US\$ 35.6 per unit. Active Noise-Cancelling (ANC) Bluetooth Earphones are wireless audio devices designed to deliver high-quality sound while minimizing unwanted ambient noise through advanced electronic noise reduction technology. Unlike standard earphones that passively block sound with physical isolation, ANC earphones use built-in microphones to detect external sounds and generate opposing sound waves that effectively cancel out the noise, creating a quieter listening environment. By integrating Bluetooth connectivity, these earphones provide users with wireless freedom, making them convenient for commuting, traveling, exercising, or working in noisy environments. They are available in various forms, including in-ear true wireless earbuds, on-ear, and over-ear headphones, each tailored to different user preferences for comfort, portability, and performance. The combination of active noise cancellation and wireless convenience makes ANC Bluetooth earphones a popular choice for both casual listeners and professionals seeking immersive, distraction-free audio experiences.

The global Active Noise-cancelling (ANC) Bluetooth Earphones market size was estimated at USD 4451.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
