Report Overview

Active noise reduction wearable heart rate variability detection device refers to the slight difference between successive cardiac cycles, reflecting the continuous instantaneous fluctuation of heart rate, and heart rate fluctuation is not accidental, but the regulation of internal nerves and body fluids, in order to adapt to different physiological conditions or certain pathological conditions inside and outside the body. In response to stress, HRV is a non-invasive indicator of the activity of the autonomic nervous system and its balance. The HRV of healthy people is large and complex, and the HRV of disease or stress is significantly lower.
