### Report Overview

Q-switching technology is an effective method to obtain high-energy short pulses. The Q value is an index to evaluate the quality of the optical resonator in the laser.

The active Q-switched laser actively modulates the intracavity loss through a modulator. For example, an acousto-optic modulator is inserted in the cavity, and when RF power is applied, part of the light beam overflows the cavity through diffraction. After storing high energy in the laser medium, the RF power is suddenly turned off to form and output a laser pulse.

Actively Q-switched laser energy is continuously adjustable, while passively Q-switched laser energy is fixed.

This report provides a deep insight into the global Actively Q-Switched Solid-State Lasers market covering all its essential aspects.
