Abstracts

Interactive dressings for acute wounds are designed to support and enhance the natural healing process by maintaining an optimal wound environment. These dressings, often made from materials like hydrogels, hydrocolloids, and foam, help manage exudate, provide a barrier against infection, and keep the wound moist, which is essential for rapid healing. In some cases, these dressings may also include antimicrobial properties or deliver active agents to promote faster recovery. By facilitating a controlled and protective healing environment, interactive dressings for acute wounds help reduce healing times, minimize the risk of complications, and improve overall patient outcomes.
